PRATEEK DAS

Computer Science Undergraduate & Aspiring Software Developer Portfolio | LinkedIn | GitHub

---

I am a software developer driven by a need to understand how systems work under the hood. My experience ranges from engineering custom C++ rendering engines to building user-centric mobile applications across both the Android and iOS ecosystems. By bridging the gap between low-level system architecture and high-level product design, I leverage my knowledge of mobile lifecycles, state management, and AI integrations to build optimized, cross-platform software.

EDUCATION

- **B.Tech in Computer Science & Engineering (Core) |** Aug 2025 - Jun 2029
  - Vellore Institute of Technology (VIT), Bhopal
- **Senior Secondary Education (Class 12th - PCM+CS+AI) |** Apr 2023 - Mar 2025
  - Delhi Public School, India
    Percentage: 90.4%
- **Secondary Education (Class 10th) |** Mar 2017 - Mar 2023
  - Delhi Public School, India
    Percentage: 91.0%

TECHNICAL Arsenal

- **Mobile & Systems:** Mobile App Architecture (MVC/MVVM), UI/UX State Management, Android (Java/Kotlin) — *Currently transitioning to Swift/iOS*
- **Core Logic:** C/C++, Python, Data Structures & Algorithms (DSA), Object-Oriented Programming
- **Technologies & Tools:** Git, SQL, Unity/Unreal Engine, OpenGL, SDL2, Adobe Suite (VFX/Design)

EXPERIENCE & LEADERSHIP Mobile Development Team (Core Member) | *GDGC VIT Bhopal*

- Architect and ship user-centric mobile applications within a collaborative team environment.
- Manage development timelines, conduct peer code reviews, and drive technical decision-making, ensuring efficient cross-functional teamwork.

Lead Software Developer (Hackathon) | *IIIT Lucknow* | *Feb 2025*

- Led a development team to build an AI-powered Resume Screening System.
- Utilized Python NLP libraries and SQL to automate complex data parsing and matching, demonstrating the ability to handle heavy backend logic. (Awarded 2nd Place).

SELECTED PROJECTS

- **Mobile Productivity Suite (Muro & Classmate):** Engineered mobile applications focused on minimalist design, efficient background processing, and intuitive UI frameworks. Demonstrates a deep understanding of mobile user experience and application lifecycles.
- **Void Engine (C++):** Engineered a custom 2D rendering engine from scratch. Implemented low-level memory management and Entity Component System (ECS) architecture, proving the ability to grasp complex, underlying system mechanics similar to iOS core frameworks.
- **AI Resume Screener (Python/NLP):** Built an automated HR tool that parses PDFs and ranks candidates, showcasing strong data handling and algorithmic problem-solving.
- **Neon Runner (Unity/C#):** Developed an highly-optimized game for mobile devices, featuring object pooling and dynamic UI State Machines.

AWARDS & HONORS

- **Winner (1st Place):** VisualizeX National VFX Competition, IIT Bombay (Dec 2024)
- **Runner-Up:** AI Resume Screening System, IIIT Lucknow Hackathon (Feb 2025)
- **Runner-Up (3rd Place):** 48-Hour Game Development Hackathon, Amity University (Oct 2024) strongest technical assets.
